

CREATING DEPTH IN YOUR PAINTINGS

WORKSHOP DESCRIPTION

This workshop will begin with a visual presentation of the basic elements of creating depth. An explanation of Linear and Aerial perspective will be discussed and the additional elements that comprise the illusion of depth such as overlap, object position, focus, value and size comparisons will be understood. There will be an exercise to follow that will help the student learn to mix an intensity scale using their oils. After lunch the students will create a painting using a source I will supply. In painting the source students will apply the elements that they learned earlier in the workshop. I will demo the painting with them, to help them understand the theories and applications. The desired outcome for the workshop will be to enable the student to learn how to recognize, mix and apply the new knowledge to all of their future paintings.
